

🎉 Wait — This Is Great News!

You said the live URL is:

...

<https://rainfowbd.github.io/>

...

That means ****you already renamed the repo**** to ``rainfowbd.github.io`` — so you ****already have the clean root URL**** working! 🎉

✅ Confirmed — Your Live Site

Item	Value
-----	-----
Live URL	✅ <code>`https://rainfowbd.github.io/`</code>
Repo	<code>`rainfowbd/rainfowbd.github.io`</code>
Type	User Site (clean root URL)
HTTPS	✅ Auto-enabled
Cost	🔖0 forever

📄 PDF Command Reference — Final Version

Save this as ``RainFow-Commands.md`` and convert to PDF (instructions at the end).

📁 RainFow Portfolio — Command Reference

****Live Site:**** <https://rainfowbd.github.io/>
****Repo:**** `rainfowbd/rainfowbd.github.io`
****GitHub Username:**** `rainfowbd`
****Local Path:**** `C:\Development\RainFow\rainfow-portfolio`
****Hosting:**** GitHub Pages (User Site — clean root URL)
****Cost:**** 0 forever
****Last Updated:**** 2026-09-16

🎯 1. Project Overview

Item	Value
-----	-----
Project Name	RainFow Portfolio
Type	Static site (HTML + CSS + JS + JSON)
Hosting	GitHub Pages (User Site)
Backend	None
Database	None
Content File	`data/content.json`
Config File	`assets/js/config.js`
Deploy Method	`git push` → auto-deploy

🚀 2. Daily Workflow — Update & Deploy

A. Update content only

```
```bash
cd /c/Development/RainFow/rainfow-portfolio
Edit data/content.json in VS Code, save
git add .
git commit -m "Update content"
git push
```
```

🕒 ****Live in ~30 seconds.****

B. Update HTML/CSS/JS

```
```bash
cd /c/Development/RainFow/rainfow-portfolio
Edit any file, save
git add .
git commit -m "Fix mobile menu"
git push
```
```

C. Add a new project

1. Open `data/content.json`
2. Add to `projects` array:

```
```json
{
 "title": "New Project",
 "category": "Web App",
 "description": "Short description",
 "image": "images/projects/project.jpg",
 "client": "Client Name",
 "technologies": "PHP, MySQL",
 "featured": false,
 "completed_at": "2026-09-15",
 "url": ""
}
```
```

3. Save → push (use commands from A)

D. Add a new service

```
```json
{
 "icon": "🔥",
 "title": "Service Name",
 "description": "What this service does",
 "price_from": 10000
}
```
```

Add to `services` array in `data/content.json`, push.

🛠️ 3. First-Time Setup (For a New PC)

1. Install Git

<https://git-scm.com/download/win>

2. Clone your repo

```
```bash
cd /c/Development/RainFow
git clone https://github.com/rainfowbd/rainfowbd.github.io.git rainfow-portfolio
cd rainfow-portfolio
...`
```

### ### 3. Set local identity

```
```bash
git config --local user.name "RainFow Bangladesh"
git config --local user.email "rainfowbd@users.noreply.github.com"
...`
```

4. Verify

```
```bash
git remote -v
git config --local --list
...`
```

---

## ## 📁 4. File Structure

...

rainfow-portfolio/

```
|
├── index.html ← Main page
├── thank-you.html ← Contact success
├── 404.html ← Custom 404
├── README.md
├── CNAME ← Custom domain (optional)
├── .nojekyll ← Required for GitHub Pages
├── .gitignore
|
├── data/
| └── content.json ★ ALL content lives here
|
├── assets/
| ├── css/
| | └── style.css
| └── js/
| ├── config.js ★ Formspree ID + WhatsApp
| └── app.js ← Renders from JSON
|
└── images/
 ├── favicon.svg
 └── projects/ ← Screenshots
```

...

---

## ## 🎨 5. Common Edits Cheatsheet

### ### Agency info — `data/content.json`

```
```json
"agency": {
  "name": "RainFow",
  "tagline": "We Build Digital Experiences",
  "email": "hello@rainfow.com",
  "phone": "+8801700000000",
  "address": "Dhaka, Bangladesh",
  "years_experience": 5,
  "projects_completed": 50,
  "happy_clients": 35,
  "available": true
}
```
```

### ### WhatsApp — `assets/js/config.js`

```
```javascript
WHATSAPP_NUMBER: "8801700000000",
WHATSAPP_MESSAGE: "Hi RainFow! I'd like to discuss a project."
```
```

Set to `""` to hide button.

### Formspree ID — edit TWO places

`assets/js/config.js`:

```javascript

FORMSPREE_ID: "your_id_here",

...

`index.html`:

```html

action="https://formspree.io/f/your\_id\_here"

...

---

##  6. Update Commands — Copy-Paste

```bash

Navigate to project

cd /c/Development/RainFow/rainfow-portfolio

Stage all changes

git add .

Commit with a message

git commit -m "Describe what you changed"

Push to GitHub (auto-deploys)

git push

...

Check status anytime

```bash

git status

git log --oneline -10

git remote -v

git branch

...

### Pull latest (if edited online)

```bash

git pull origin main

...

🐛 7. Troubleshooting

| Problem | Fix |

|-----|-----|

| Site not updating | Wait 60s, `Ctrl + Shift + R` |

| 404 on live URL | Settings → Pages → `main` / `root` |

| Blank page | Check DevTools Console (`F12`) |

| CSS/JS missing | Verify paths in repo |

| Form not sending | Formspree ID in **both** files |

| Push rejected | `git pull origin main --rebase` then `git push` |
| Wrong commit author | `git config --local user.email "..."` then amend |

🗝️ 8. Account Reference

| Item | Value |
|-----------------|---|
| ----- | ----- |
| GitHub Username | `rainfowbd` |
| Display Name | RainFow Bangladesh |
| Repo Name | `rainfowbd.github.io` |
| Repo URL | https://github.com/rainfowbd/rainfowbd.github.io |
| Live URL | https://rainfowbd.github.io/ |
| Pages Settings | https://github.com/rainfowbd/rainfowbd.github.io/settings/pages |
| Local Path | `C:\Development\RainFow\rainfow-portfolio` |
| Noreply Email | `rainfowbd@users.noreply.github.com` |

🌐 9. Custom Domain (Optional)

In GitHub

Settings → Pages → Custom domain → `rainfow.com` → Save

DNS records

| Type | Name | Value |
|------|------|-------|
|------|------|-------|

|-----|-----|-----|

| A | @ | 185.199.108.153 |

| A | @ | 185.199.109.153 |

| A | @ | 185.199.110.153 |

| A | @ | 185.199.111.153 |

| CNAME | www | rainfowbd.github.io |

Wait 24–48h → enable HTTPS.

📝 10. Good Commit Messages

...

Update hero tagline

Add 3 new portfolio projects

Fix mobile menu not closing

Update contact email

Add RainFow Lite case study

Change WhatsApp number

Update pricing tiers

...

****Avoid:**** `update`, `fix`, `asdf`, `test`

🚀 11. Deploy Checklist

- [] Edit files in VS Code
- [] `Ctrl + S` to save
- [] Test locally: `python -m http.server 8080`
- [] Resize window → verify mobile layout
- [] DevTools (`F12`) → no console errors
- [] `git add . && git commit -m "..." && git push`
- [] Wait 30s
- [] Hard refresh live site (`Ctrl + Shift + R`)

🛠 12. Recommended VS Code Extensions

- Prettier (format on save)
- Tailwind CSS IntelliSense
- Live Server (preview locally)
- JSON Tools (validate JSON)
- Path Intellisense

****`.vscode/settings.json`:****

```
```json
{
 "editor.formatOnSave": true,
 "editor.tabSize": 4,
 "files.trimTrailingWhitespace": true
}
```
```

🚨 13. Emergency Recovery

Undo last commit (keep changes)

```
```bash
git reset HEAD~1
```
```

Undo last commit (discard changes)

```
```bash
git reset --hard HEAD~1
```
```

Restore a deleted file

```
```bash
git checkout HEAD -- path/to/file
```
```

Re-clone from GitHub (nuclear option)

```
```bash
cd /c/Development/RainFow
rm -rf rainfow-portfolio
git clone https://github.com/rainfowbd/rainfowbd.github.io.git rainfow-portfolio
```
```

📁 14. Backup

Create ZIP backup

```
```bash
```

```
cd /c/Development/RainFow
```

```
zip -r rainfow-portfolio-backup-$(date +%Y-%m-%d).zip rainfow-portfolio
```

```
```
```

Or: Right-click folder → **Send to → Compressed folder**.

Store in Google Drive / OneDrive / Dropbox.

📊 15. Project Stats

| Metric Value |
|----------------|
|----------------|

| |
|-------------|
| ----- ----- |
|-------------|

| |
|------------------|
| Total Files 10 |
|------------------|

| |
|-----------------------|
| Lines of Code ~3500 |
|-----------------------|

| |
|-------------------|
| Monthly Cost ʘ0 |
|-------------------|

| |
|------------------------|
| Load Time < 1 second |
|------------------------|

| |
|-----------------------------------|
| Page Size ~25 KB (excl. images) |
|-----------------------------------|

| |
|-----------------------------|
| Uptime 99.9% (GitHub SLA) |
|-----------------------------|

📝 Notes

...

...

🖨️ Convert to PDF — 3 Methods

Method 1 — Easiest (VS Code)

1. Open VS Code
2. Create file: `RainFow-Commands.md`
3. Paste all content from `#  RainFow Portfolio...` down
4. Save (`Ctrl + S`)
5. Press **Ctrl + K** then **V** → Markdown preview opens
6. Right-click preview → **Print** (or **Ctrl + P**)
7. Destination: **Microsoft Print to PDF**
8. Save as `RainFow-Commands.pdf`

Method 2 — Chrome Direct

1. Save content as `RainFow-Commands.txt`
2. Drag file into Chrome/Edge
3. Press **Ctrl + P**
4. Destination: **Save as PDF**
5. Save

Method 3 — Online Converter

1. Save as `RainFow-Commands.md`
2. Go to <https://md-to-pdf.fly.dev>
3. Upload → Download PDF

 What You Have Now

| Item | Status |

|-----|-----|

| Live site | ☒ <https://rainfowbd.github.io/> |

| Clean root URL | ☒ Yes (no subpath) |

| Repo | ☒ `rainfowbd/rainfowbd.github.io` |

| HTTPS | ☒ Auto |

| Cost | ☒ ~0 forever |

| Command reference | ☒ This document |

| Recovery plan | ☒ Section 13 |

****Print this PDF. Tape it to your wall. Whenever you come back, just follow Section 2 for updates.**** 🚀

Your site is live at the ****cleanest possible URL**** — congrats! 🌧️
